

## IMPORTANT NOTE - FORMATTING HARD DISKS IN FAT32

On this player you can use hard disks with up to 500GB on condition that they are formatted in Windows FAT32.

However most new hard disks are formatted in NTFS when you buy them!  
Moreover Windows does not allow you to format such volumes in FAT32 so you will need a separate software tool to format your hard disk in FAT32.

Several tools exist but for your convenience we selected 1 free tool for you to use.  
We suggest to download and use "EASEUS Partition Master – Home Edition": surf to their website and download the latest version: <http://www.partition-tool.com/personal.htm>  
This version is free for personal use only, it can only be used on Windows 32bit version.

⇒ If you have Windows 64bit, you should buy the Professional Edition (not free).

### **Attention:**

Formatting tools should only be used when you know exactly what you're doing!  
If you're not sure, please ask someone with computer knowledge to help you!

**BEGLEC DOES NOT offer any support for this software !**

Use of this software is at your own risk,  
Beglec is not responsible for any damages incurred by misuse.
