

# Traktor PRO 2 – Midi Mapping SYNQ DMC 2000

## INSTALLATION AND USERS MANUAL

# !!!! IMPORTANT

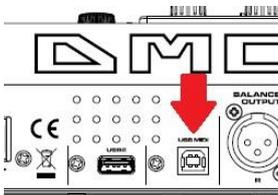

Follow these steps to connect the controller and use (import) the midi mapping in Traktor Pro 2

Before connecting, be sure the Deck/MIDI switches are set to 'MIDI' on the DMC 2000

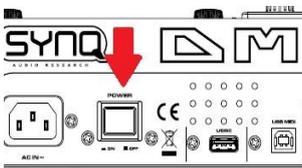

### **STEP 1**

Connect the DMC2000 via the supplied USB cable ...

*Backside DMC2000*

to a USB port on your computer.  
Now power-up the DMC2000

*Backside DMC2000*

Once you turned on the controller, the necessary driver will automatic be installed.

### **STEP 2**

Start up the Traktor 2 software

### **STEP 3**

Configure your Traktor 2 as following:

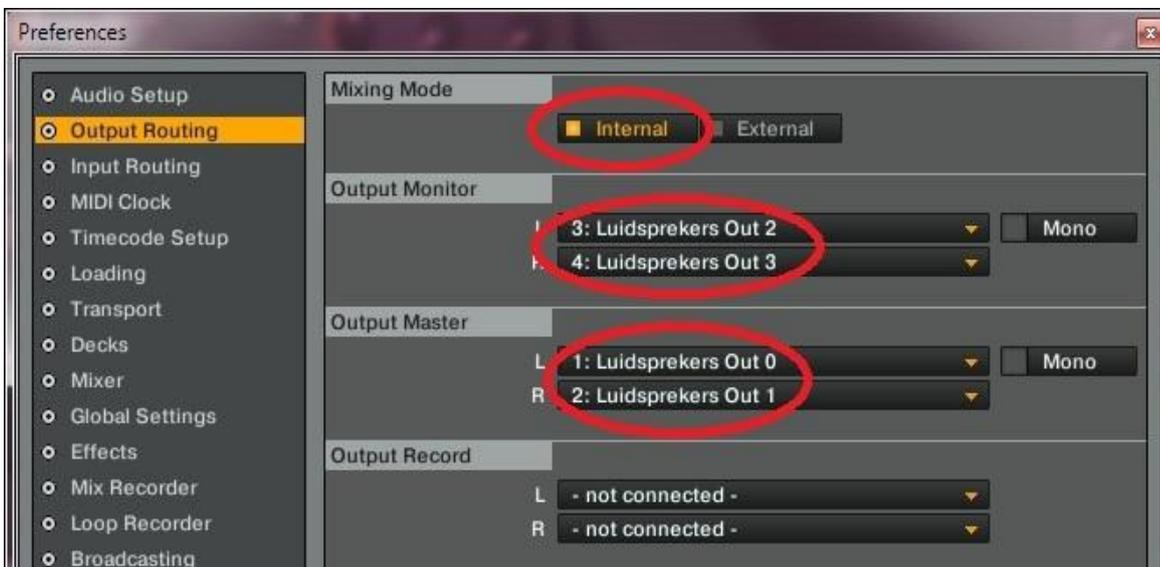

Open **Preferences**.

In **Audio Preferences** select DMC-2000 as Audio Device (drop down menu)

Also do the same for **Built-in Soundcard**:

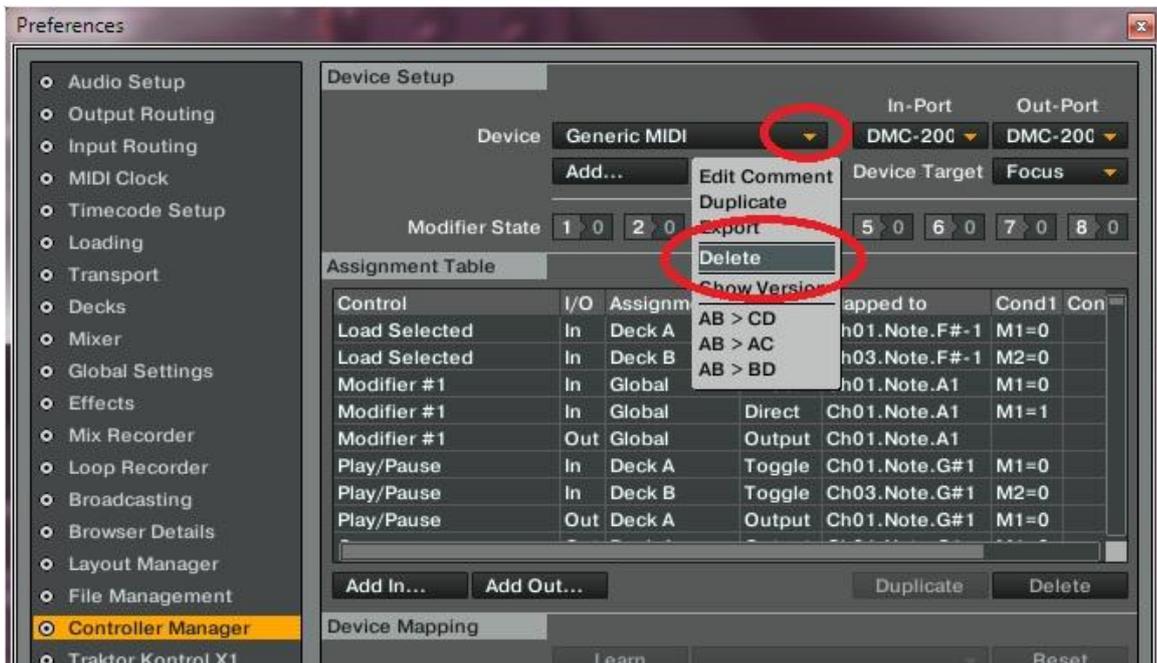

Output Routing:

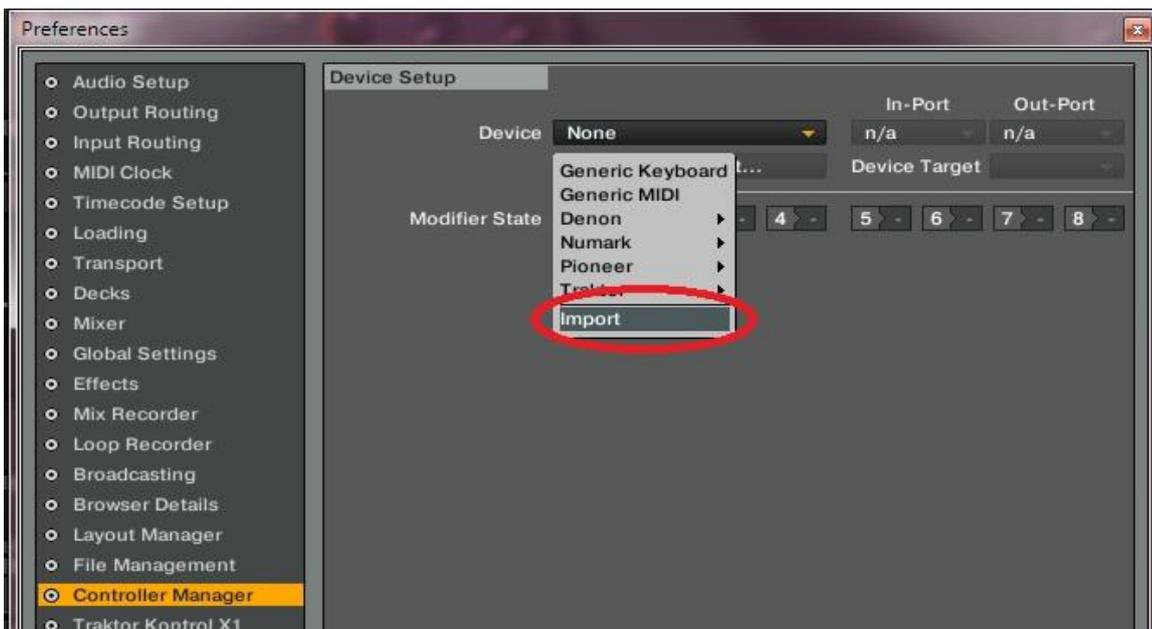

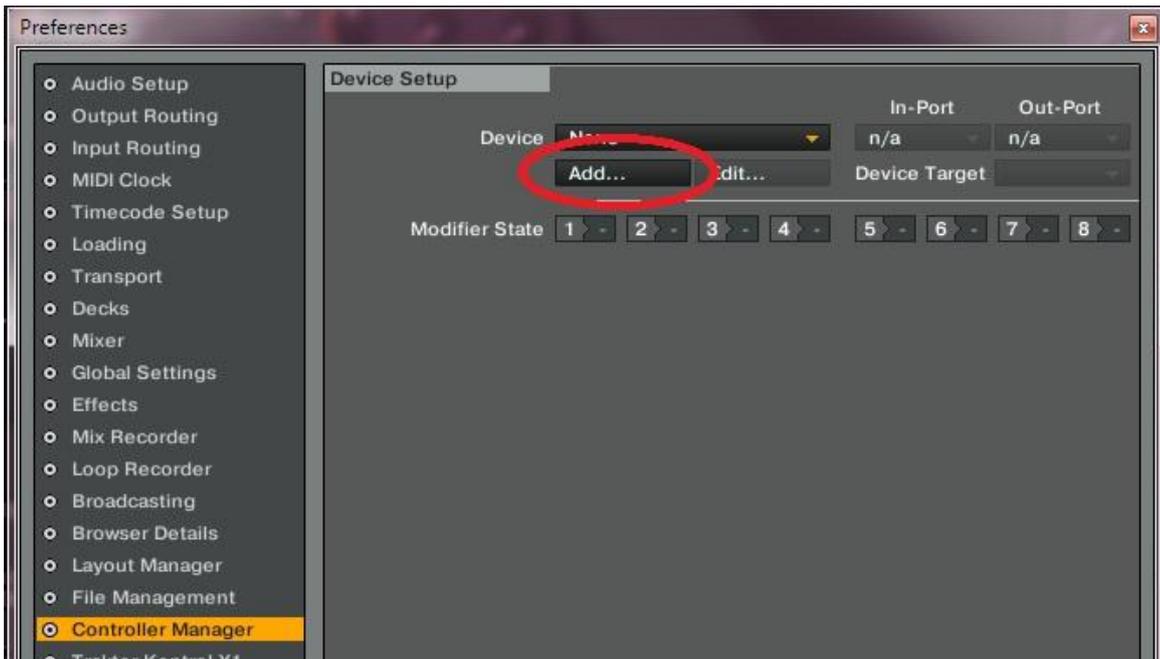

#### STEP 4

Delete current midi settings and import the DMC 2000 midi map:

Don't worry, deleting (removing) the current midi mapping won't actually delete the mapping from your computer, it will only be removed from the Traktor IO list (Repeat this for all the mappings so there are no more mappings in the device drop-down menu)

Once you deleted (removed) all the mappings from IO list (device drop-down menu), you are ready to import the DMC2000 mapping (no more devices in the Device Setup):

Locate the DMC2000 tsi-file (midi mapping) you want to import (the one with Xfader disabled or Xfader unabled)

Once the tsi is imported, be sure the In- and Out-Port are set to 'DMC-2000' via the drop-down menus. In a normal case, these are already filled in.

This midi mapping, in combination with the DMC 2000, is developed to use 2 FX units (group or single) Effects setup (Preferences):

It is advisable in Mixer layout you have 'EQ + Fader' and 'Filter + Key + Gain + Cue + Balance' checked, (for the midi mapping is developed for internal mixing mode) so you always have a clear view over the mixer and it's current settings in your DJ software while handling the DMC 2000.

Preferences/Mixer:

## STEP 5

Have fun with the DMC 2000 !!!

Note: From now on, when you want to use the DMC 2000 in combination with Traktor Pro 2, first connect and power up the DMC 2000 and THEN start Traktor Pro 2 software.
